

If you use putty, you may see that the curses libraries do not draw your lines properly. You might get something that looks like this:

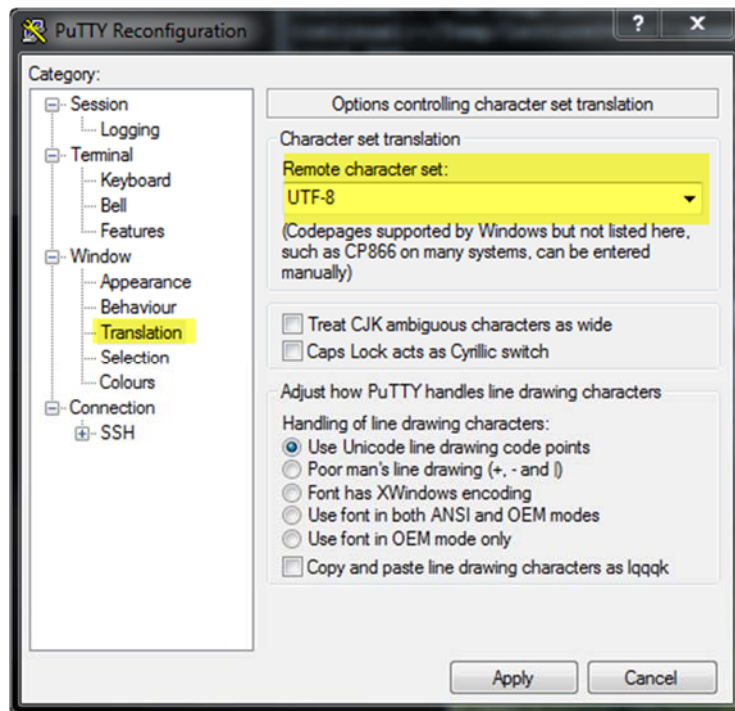

There is a simple fix. You must modify the character translation that putty is using.

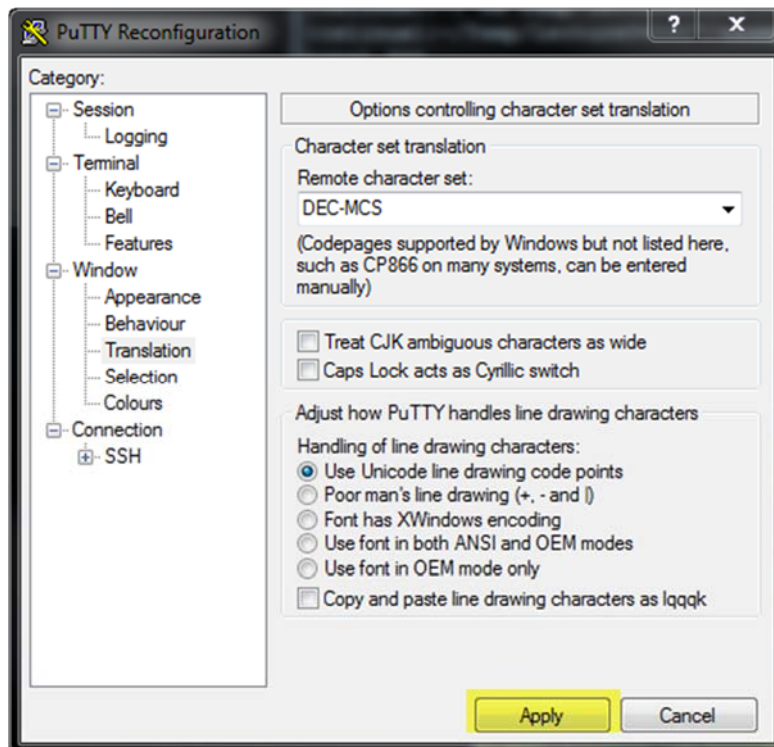

To perform this, click your RIGHT mouse button in the putty window title bar. You should receive a menu. Select the “Change Settings...” area:

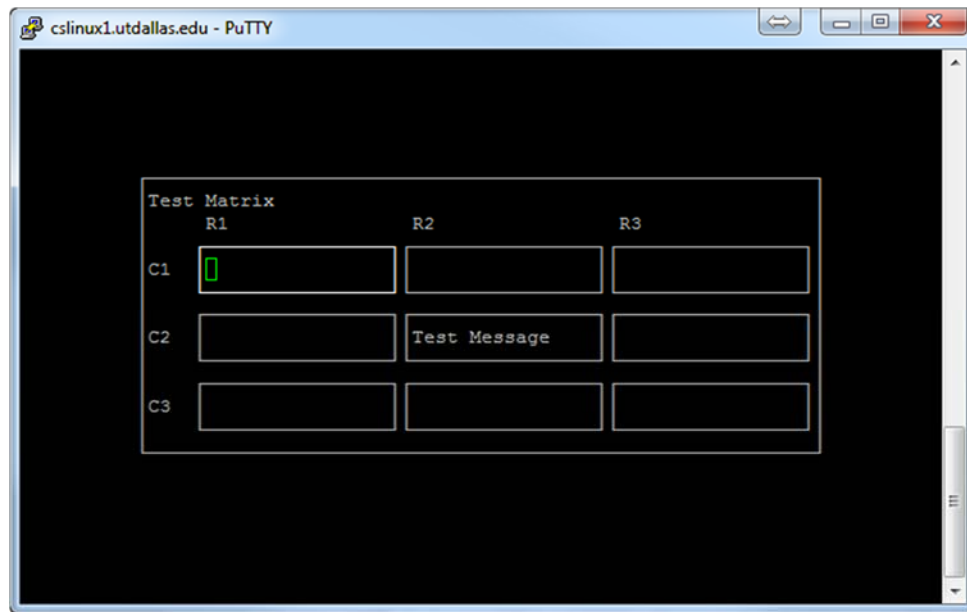

Look in the “Window->Translation->Remote Character Set” dropdown:

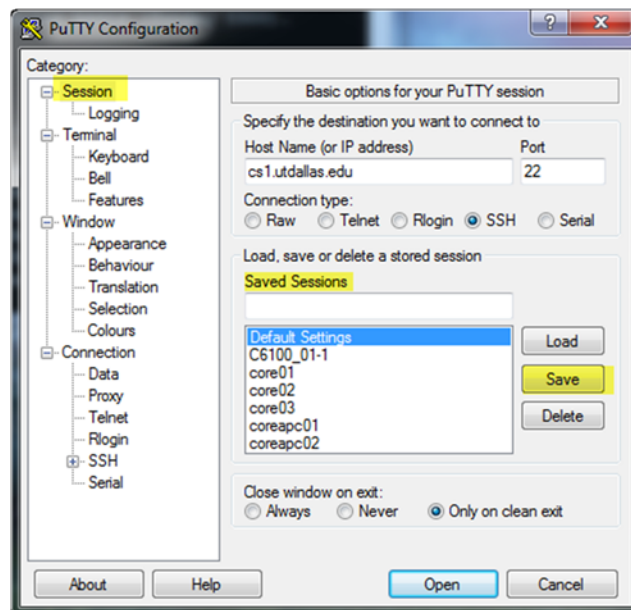

Change this from UTF-8 to DEC-MCS and check “Apply”.

When you re-run your program, you should see a display that looks like:

If you want to make the change permanent, highlight the “Session->Saved Sessions->Default Settings” area and select “Save”:

Please let me know if you this fails to work.
